

# Computers in the Classroom – A Collaborative Approach

## **Facilitator’s Guide**

The **Facilitator’s Guide** includes an instructional workshop that demonstrates the methodology used in the handbook, “Computers in the Classroom – A Collaborative Approach” (Second Edition) by Ann Haney, and at the same time allows participants to acquire computer skill-sets. The workshop experience provides practitioners with excellent suggestions on how to integrate computers into their day-to-day teaching practice.

The handbook, “Computers in the Classroom – A Collaborative Approach” integrates meaningful adult education philosophy with practical teaching ideas. The theme of each lesson is applicable to the students’ real-life needs or interests. The lessons help learners develop Essential Skills in computer use, reading text, writing, document use, oral communications and thinking skills. Overall, learners become more confident in problem-solving situations as they use their newly acquired computer skills in their daily work.
